**MINISTRY OF HEALTH AND SOCIAL SERVICES**

## **PROGRESS ON THE TRUSTED TRAVEL SYSTEM**

The process of implementing the Trusted Travel system in Namibia is at an advanced stage. As of today, 11/07/2021, Namibia has done the following:

1. Registration with PanaBIOS of all authorized laboratories (those that are authorized to conduct COVID-19 tests in Namibia)
2. Training of laboratory technicians from all registered laboratories on the use of the Trusted Travel system.
3. Training of all Port Health Officers on the use of the system at Points of Entry
4. Currently in the process of engaging stakeholders to ensure they are onboard throughout and during the official rollout.

Namibian Laboratories are onboard and are already creating codes for travelers exiting Namibia to countries that are live with the Trusted Travel system. All Port Health Officers in Namibia have also been granted access to the system and are therefore able to do the verifications, provided that they have necessary equipment.

The technical team responsible for the implementation of the Trusted Travel System in Namibia is working around the clock to ensure that at least minimum standards are met for effective operation of the system. It is therefore difficult at this point to specify the official rolling date of this system.
